

PEY-MAN

Turn phone-sensor workouts into a Pac-Man fitness game.

TEAM

YURDAKULOGLU

azadbulut

STACK

MATLAB

Mobile Sensors

Pure UI

Fitness dashboards are useful, but sterile

The opportunity is motivation: make progress visible, playful, and

PROBLEM

Numbers alone
are easy to ignore

INSIGHT

Game progress
creates feedback

ANSWER

Pey-Man maps
movement to maze

Goal: a judge understands the workout quality story

From raw sensors to arcade progress.

Validation prints at runtime. Latest local fallback evidence

Novelty is not a theme; it is the whole

Pure MATLAB arcade UI `figure, uiaxes, rectangles, patches; no web/game eng`

Fatigue narrative `Timeline answers when movement quality starts changing`

Trust-aware metrics `Confidence and validation are visible, not hidden in l`

Demo resilience `Runs with sample data, synthetic fallback, local files`

Demo results: the model feeds the game.
